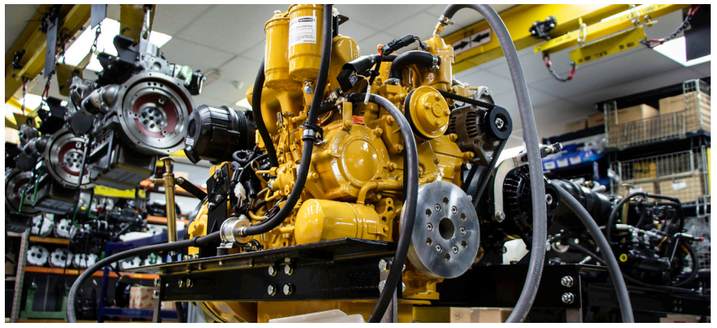
Quietly leading the way



Barrus has been a major player in the marine industry for the majority of its 100-year history and, for over 21 years, we have manufactured engines for the Inland Waterways.

In 1998, we began production of the Shire range of inboard engines fitted to narrow boats, wide beam boats and dutch barges. In that same year, we were the first manufacturer to design and fit a genuine twin thermostat system - and still are today.

To enhance our portfolio, we have introduced Shire Hybrid packages which deliver cleaner, greener power. Two variations of the Hybrid package are available to suit various requirements at sea.

The latest addition to the collection is Marine Equipment. Including anodes and lightbulbs from Talamex all the way up to on-board WiFi and TV antennas from Glomex, the range is filled with every-day boating essentials.

After sales support

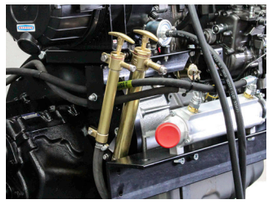
Barrus carries over 60,000 lines as spare parts inventory company-wide and has a team dedicated to Shire and John Deere genuine parts to extend the life of your engine. Shire manuals, parts lists and service sheets are also readily available at barrus.co.uk/shire to ensure you have all the information you need - there's even some basic servicing videos to help you get going.

Our team of highly trained technicians provide on-going support throughout the life of the engine which is backed by a specialist dealer network nationwide.

Key Features

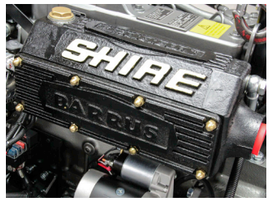
High Torque Levels
All models have high torque at low speed and 15WB - 30WB are RCD II (Recreational Craft Directive) emission compliant.

Easy Servicing
The sump drain pump makes maintenance simple. Oil can be drained easily, particularly on the Shire 50, 70 and 85 with the additional gearbox drain pump.



Maximum Electrical Power
A single alternator comes as standard with the option to upgrade to a second. This ensures that the start battery and domestic batteries are rapidly charged and on separate circuits.

Corrosion Protection
All castings and water pipes are black E coated for extra adhesion and corrosion resistance.



Clean Fuel
The addition of a fuel pre-filter and water drain provides the most efficient filtration system and ensures factory quality levels are maintained throughout its life.

Peace of Mind
All major engine and components parts have a 2 year commercial warranty. Electrical components 1 year.
